

Repository Type (Organization vs Personal)

If the repository belongs to an organization:

- Ensure your personal access token has the necessary permissions for the organization.
- Some organizations require explicit approval or fine-grained permissions for tokens.

How to Check:

Visit your organization's settings and ensure your token has proper authorization.

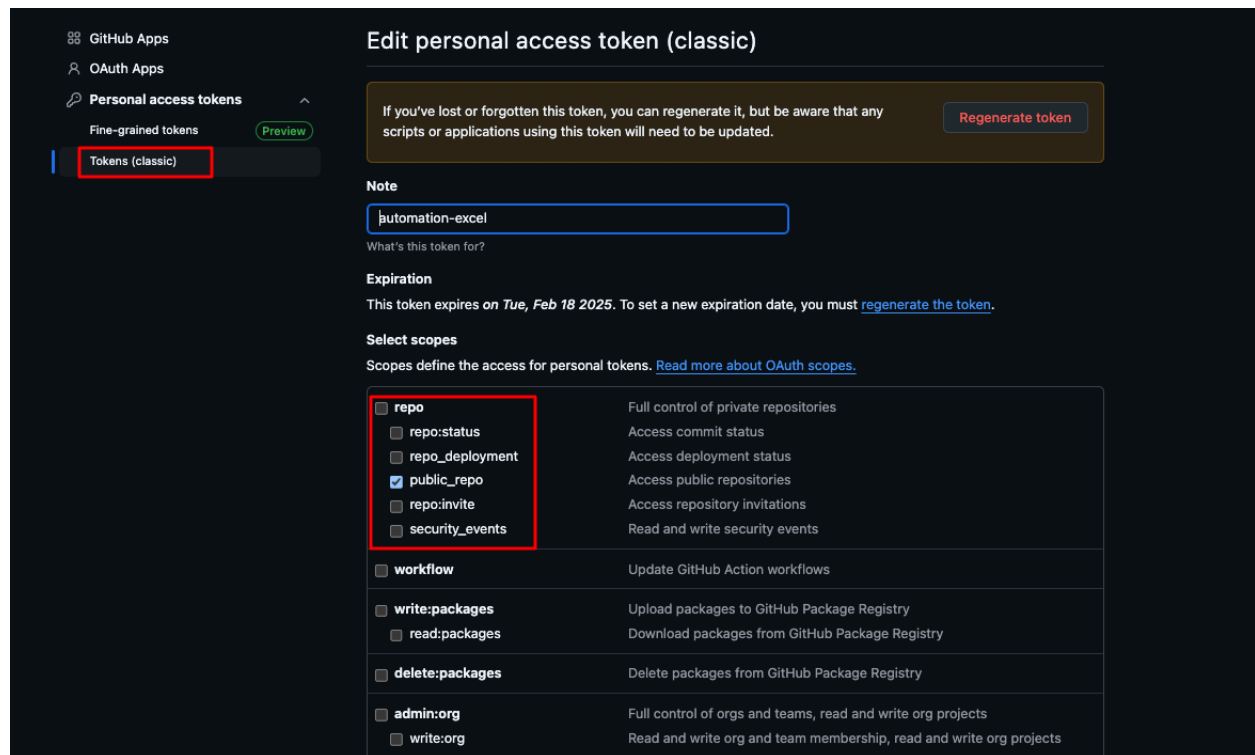

Repo Permissions

If the repository is private, ensure:

The GitHub Personal Access Token includes the required permissions:

- repo scope (for private repositories).
- public_repo scope (for public repositories).

Profile Settings -> Developer Settings -> Personal access tokens

Restrict the Token to a Specific Repository (Fine-grained Token - Beta Feature)

If you want to restrict the token to a specific repository:

- Go to Fine-grained Personal Access Tokens.
- Click "Generate new token".
- Under "Repository access", choose "Only select repositories".
- Pick the repository you want to grant access to.
- Select the permissions as needed and generate the token.

For Fine-grained tokens user needs to give access to certain Repositories permissions

Repository permissions

Repository permissions permit access to repositories and related resources.

Steps for integrating online Google Sheets

Google Sheets offers APIs that allow programmatic access to spreadsheets. You can use the Google Sheets API to monitor and update the sheet.

1. Go to the Google Cloud Console.
2. Create a new project.

3. Enable the Google Sheets API and Google Drive API.

DETAILS PERMISSIONS **KEYS** METRICS LOGS

Keys

 Service account keys could pose a security risk if compromised. We recommend you avoid downloading service account keys and instead use the [Workload Identity Federation](#). [Learn more about the best way to authenticate service accounts on Google Cloud](#).

 Google automatically disables service account keys detected in public repositories. You can customize this behavior by using the 'iam.serviceAccountKeyExposureResponse' organization policy. [Learn more](#)

Add a new key pair or upload a public key certificate from an existing key pair.

Block service account key creation using [organization policies](#).
[Learn more about setting organization policies for service accounts](#)

ADD KEY ▾

Type	Status	Key	Creation date	Expiration date	
	 Active	b373ba3237ae392bdbd8b4f451526f42432f42de	Jan 19, 2025	Jan 1, 10000	

To download the JSON file from Google Cloud:

- Go to IAM & Admin, click on "Service Accounts."
- Select your service account, and click on the "Keys" tab.
- Add a new key, choose "Create new key."
- Set "Key type" to "JSON" and click "Create."
- Download the JSON file prompted by your browser.

Remember: It's a one-time download; consider temporary access for better security.

6. Place the File in the Correct Directory

- Save the `credentials.json` file in your project folder or a directory accessible by your script.

- Update the `path/to/credentials.json` placeholder in your code with the actual path to the file.

Select items to perform actions on them.
